

CLIENT REFERRAL SYSTEM

How It Works

Automated referral tracking, agent reminders, and budget-form handoff.

What This System Does

When a new client is referred to an agent, this system automatically emails the agent, tracks whether they've made contact, and nudges them every few days if they haven't. Once the agent confirms contact, it automatically follows up asking them to send the client a Budget/Fundamentals form -- and keeps nudging until that's confirmed done too. Every step happens through a single click in an email, with no separate login or dashboard needed.

The Full Flow

Stage	Status	What Happens
1	Not Contacted	Referral submitted -> Agent gets an email with client details and a "Mark as Contacted" button. If they don't click it within 3 days, a reminder repeats every 3 days until they do.
2	Contacted	Agent clicked "Mark as Contacted" -> they immediately get an email with the Budget/Fundamentals form link and a "Client Completed Budget Form" button. Same 3-day nudge logic applies if they don't click it.
3	Plan Done	Agent clicked "Client Completed Budget Form" -> flow stops completely. No further emails are sent for this referral.

Where the Message Content Lives

All wording lives in a sheet tab called **Message_Config** (columns: Type | Subject | Body) -- not in code -- so any message can be edited anytime without touching the script.

```
Type | Subject | Body
Referral | New Client Referral: ... | Hi {{agentName}}, ...
Reminder | Reminder: Please Contact ... | Hi {{agentName}}, ...
BudgetRequest | Next Step: Send ... the Form | Hi {{agentName}}, ...
BudgetReminder | Reminder: Has ... Completed... | Hi {{agentName}}, ...
```

Available placeholders: **{{clientName}}**, **{{clientTel}}**, **{{clientEmail}}**, **{{agentName}}**, **{{budgetFormUrl}}**.

Lines starting with "-" become bullet points automatically in the email.

The Functions Involved

- **onFormSubmit** -- fires the moment the referral form is submitted. Sets status to "Not Contacted" and sends the first email.

- **checkReminders** -- runs once daily. Checks every "Not Contacted" and "Contacted" row, and sends the appropriate reminder if 3+ days have passed since the last one.
- **doGet** -- handles clicks on the email action buttons (deployed as a Web App). Updates the status and, when moving to "Contacted," immediately sends the Budget Form request.
- **setup** -- run once to install both the form-submit trigger and the daily reminder check together. Safe to re-run anytime.
- **testReferralFlow** -- sends the full email sequence for one specific row instantly, for testing without waiting on real form submissions or real days passing.

How the Reminder Timing Works

Each referral row tracks a **Last Reminder Sent** date. Once a day, the system checks: has it been 3 or more days since that date, and is the referral still unresolved? If so, it sends the matching reminder and resets the date. This repeats indefinitely -- there's no cap on how many reminders go out -- until the agent takes the corresponding action.

When status moves from "Not Contacted" to "Contacted," the reminder date resets immediately, so the 3-day countdown for the budget-form stage starts fresh rather than inheriting time already elapsed from the contact stage.

What's Configurable

- Column names (Client Name, Tel, Email, Agent Name, Agent Email) -- set once at the top of the script if your form uses different field labels.
- All email wording -- via the Message_Config sheet, no code changes.
- The Budget/Fundamentals form link -- a single constant, update anytime once that form is built.
- The reminder interval -- currently 3 days for both stages, adjustable in one place.

This system runs entirely on a Google Form, Google Sheet, and Apps Script -- no third-party service or subscription required. The one-click email buttons work via a small deployed Web App; if your account can't deploy those (common on some organization accounts), the same buttons can be swapped for a Google-Form-based alternative with one extra click.
